

National Severe Weather Warning Service

Chief Forecasters Assessment

A strong, high-level jet is expected to engage warm low level air to give rise to a rapidly moving low pressure system later on Sunday. This is expected to run northeastwards, probably across England and Wales, with very strong winds on its southern and western flanks. There is the potential for gusts of over 70 mph, especially on exposed coasts, both in southwesterly winds ahead of the low and west to northwesterly winds behind it.

The Met Office have issued a **Yellow Alert of Wind**

Valid from **00:05 on Mon, 28th Oct 2013** until **21:00 on Mon, 28th Oct 2013**

A very intense low pressure system is forecast to run northeastwards across the country early on Monday, bringing the potential for an exceptionally windy spell of weather for southern parts of the UK. At the same time, persistent, heavy rain could cause some surface water flooding.

At this early stage there is uncertainty about the timing, intensity and track of the low. However, the public should be aware of the risk of damage to trees and structures, as well as the possibility of disruption to transport and power supplies.
